

# Microsoft

## Exam Questions AB-730

AI Business Professional

**NEW QUESTION 1**

You have a Microsoft 365 Copilot license.  
You plan to run several prompts.

What should you use to ensure that Copilot generates the best response for each prompt? More than one answer choice may achieve the goal. To answer, select the Best options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

**Prompt 1:** From /Feedback\_Q1–Q3.xlsx, consolidate all the sheets, categorize the feedback by theme, compute the positive/negative sentiment by product line, and visualize the top five drivers.

The Analyst agent  
 Chat  
 The Researcher agent

**Prompt 2:** Using our SharePoint folder '/Go-To-Market/2025' and reputable web sources, produce a 1-page brief about AI trends that includes five key insights, citations, and callouts on gaps/risks.

The Analyst agent  
 Chat  
 The Research agent

**Prompt 3:** For a VP, prepare a polished executive email that distills the strategic priorities, critical decisions, and immediate next steps from the attached Strategic\_Plan\_2025.docx, ensuring that the tone aligns with senior leadership's communication standards.

The Analyst agent  
 Chat  
 The Researcher agent

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

**Prompt 1:** From /Feedback\_Q1–Q3.xlsx, consolidate all the sheets, categorize the feedback by theme, compute the positive/negative sentiment by product line, and visualize the top five drivers.

The Analyst agent  
 Chat  
 The Researcher agent

**Prompt 2:** Using our SharePoint folder '/Go-To-Market/2025' and reputable web sources, produce a 1-page brief about AI trends that includes five key insights, citations, and callouts on gaps/risks.

The Analyst agent  
 Chat  
 The Research agent

**Prompt 3:** For a VP, prepare a polished executive email that distills the strategic priorities, critical decisions, and immediate next steps from the attached Strategic\_Plan\_2025.docx, ensuring that the tone aligns with senior leadership's communication standards.

The Analyst agent  
 Chat  
 The Researcher agent

**NEW QUESTION 2**

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

## Answer Area

### Statements

Microsoft 365 Copilot uses contextual information from your organization to suggest prompts.

Yes

No

Microsoft 365 Copilot can use contextual information from your organization to train the large language model. (LLM).

Microsoft 365 Copilot uses contextual information from your organization to augment a prompt, before sending the prompt to the large language model (LLM).

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

Microsoft 365 Copilot is designed to be helpful by using work context—for example, the files you have access to, recent activity, meetings, emails, and SharePoint/OneDrive content—to suggest relevant prompts and help you start tasks faster. It also uses this context to augment your prompt before it is sent to the LLM. This is the grounding approach (often described as retrieval-augmented generation): Copilot retrieves relevant organizational content you're permitted to access and adds it as supporting context so responses are accurate and business-relevant. However, Microsoft 365 Copilot does not use your organization's contextual data to train the underlying foundation model. That separation is critical for enterprise privacy and compliance: your prompts, responses, and tenant data are used to generate the answer for your session and permissions, but are not used to improve or retrain the base LLM. This approach supports responsible AI, protects confidential business information, and ensures outputs respect access controls.

#### NEW QUESTION 3

You ask Microsoft 365 Copilot to create a report based on information from the web. You verify the response and discover that some information is fictional. What is this an example of?

- A. deepfake
- B. fabrication
- C. overreliance
- D. prompt injection
- E. bias

**Answer:** B

#### Explanation:

This scenario is an example of fabrication, which is commonly referred to in generative AI contexts as a hallucination. Fabrication occurs when an AI system generates information that appears credible but is factually incorrect, invented, or unsupported by verifiable sources. According to Microsoft AI Business Professional guidance, large language models predict text based on patterns learned during training. They do not know facts in the human sense. As a result, when asked to generate reports using web-based information, the model may produce plausible-sounding but fictional details if sufficient grounding or reliable sources are not provided. Deepfake refers specifically to synthetic media such as manipulated images, audio, or video. Overreliance describes a human behavior risk where users trust AI outputs without verification. Prompt injection is a malicious technique designed to manipulate model behavior. Bias refers to systematic unfairness in outputs. In this case, the presence of fictional information in the generated report directly aligns with fabrication, making option B the correct answer.

#### NEW QUESTION 4

You need to access Microsoft 365 Copilot from a web browser. Which URL should you use?

- A. <https://m365.cloud.microsoft>
- B. <https://copilotstudio.microsoft.com>
- C. <https://myapps.microsoft.com>
- D. <https://myaccountmicrosoft.com>

**Answer:** A

#### Explanation:

Microsoft 365 Copilot can be accessed via its dedicated web experience for enterprise users. The correct web entry point for Microsoft 365 Copilot is <https://m365.cloud.microsoft>, which provides authenticated access to Copilot features within the Microsoft 365 environment. This URL routes users into the Microsoft 365 ecosystem where Copilot integrates with organizational data such as SharePoint, OneDrive, Teams, and Outlook. It ensures that users are authenticated through Microsoft Entra ID and that access controls are enforced according to tenant policies. Option B refers to Copilot Studio, which is used to build and manage custom copilots and agents rather than access the Microsoft 365 Copilot chat experience. Option C (My Apps) is a general application launcher portal. Option D is an incorrect account management URL and does not provide Copilot access. Therefore, to access Microsoft 365 Copilot from a web browser, the correct URL is <https://m365.cloud.microsoft>.

#### NEW QUESTION 5

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
You can add a Microsoft Teams chat as a knowledge source to a Microsoft 365 Copilot agent.	<input type="radio"/>	<input type="radio"/>
You can add a Microsoft 365 Copilot conversation as a knowledge source to a Copilot agent.	<input type="radio"/>	<input type="radio"/>
You can use an image file, such as a JPG file, as a knowledge source for a Microsoft 365 Copilot agent.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Statements:

You can add a Microsoft Teams chat as a knowledge source to a Microsoft 365 Copilot agent. Answer: Yes

You can add a Microsoft 365 Copilot conversation as a knowledge source to a Copilot agent. Answer: No

You can use an image file, such as a JPG file, as a knowledge source for a Microsoft 365 Copilot agent. Answer: NO

Microsoft 365 Copilot Agent Builder supports grounding agents in approved knowledge sources so responses are accurate and permission-trimmed. Teams chats can be used as a knowledge source: Microsoft Learn confirms you can ground an agent in Teams data, including chat messages (and optionally scope to specific chats), enabling the agent to reference collaboration context when answering questions.

A Copilot conversation itself is not a supported "knowledge source" option; knowledge sources are configured from items like SharePoint content, Teams, email, websites, uploaded files, and connectors—not prior chat transcripts.

Finally, JPG images are not supported as knowledge-source file types. Microsoft's supported file types for agent knowledge include documents like .doc/.docx, .pdf, .ppt/.pptx, .txt, and Excel formats (.xls/.xlsx), but not image formats. Therefore, you cannot use a JPG as a knowledge source for a Copilot agent.

**NEW QUESTION 6**

You use Microsoft 365 Copilot.

You discover that you had a conversation that used a knowledge source that contains confidential information.

You need to delete the conversation data without requiring administrative approval. You must retain your other conversations, if possible.

What should you use?

- A. the Microsoft 365 Copilot app
- B. the Microsoft 365 admin center
- C. the Microsoft Purview compliance portal
- D. the My Account portal in Microsoft 365 Copilot

**Answer:** D

**Explanation:**

Microsoft 365 Copilot follows Microsoft's enterprise data governance and privacy principles, which allow users to manage their own conversation history where appropriate. According to Microsoft AI Business Professional guidance, users can review and delete individual Copilot conversation histories directly from their personal account settings without requiring administrative intervention.

Option D is correct because the My Account portal in Microsoft 365 Copilot allows individual users to manage their activity history, including deleting specific conversations. This enables targeted removal of sensitive interactions while retaining other conversation data.

Option A is incorrect because the Copilot app itself does not provide full account-level activity management capabilities. Options B and C are administrative tools used for tenant-wide governance, compliance, retention policies, and eDiscovery. These portals typically require administrative privileges and are not intended for individual user self-service deletion of specific conversations.

Therefore, to delete a single confidential Copilot conversation without affecting other chats and without requiring administrator approval, the correct tool is the My Account portal in Microsoft 365 Copilot.

**NEW QUESTION 7**

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in the web, the response will always be identical.	<input type="radio"/>	<input type="radio"/>
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in your own data, the response will always be identical.	<input type="radio"/>	<input type="radio"/>
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded only in the model's knowledge, the response will always be identical.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

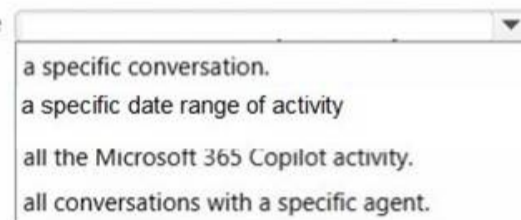

All three statements are false because generative AI responses are not guaranteed to be identical even when the prompt is the same. First, when grounded in the web, results can vary due to changing web content, different retrieved sources, or differences in how information is summarized at run time. Second, when grounded in your organization's data, responses can change based on updates to files, emails, meetings, permissions, or which specific items Copilot retrieves as the most relevant context at that moment. Third, even when relying only on the model's general knowledge, large language models are probabilistic: they may choose different wording, structure, examples, or emphasis across runs, especially when temperature/decoding settings and internal routing differ. In business scenarios, this means Copilot outputs should be treated as drafts that may require validation, and repeatability should be improved by adding precise constraints (cite specific sources, use fixed formats, specify exact sections, and request verbatim quotes where appropriate).

**NEW QUESTION 8**

**HOTSPOT**

Select the answer that correctly completes the sentence.  
 a specific date range of activity

From the Microsoft 365 My Account portal, if you select Delete history for the Copilot activity history, you can delete

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

The Microsoft 365 My Account portal provides users with control over their Copilot activity history in alignment with enterprise privacy and compliance standards. When selecting Delete history, users can remove Copilot activity based on a defined time range rather than deleting only a single conversation or all activity universally.

This functionality reflects Microsoft's commitment to transparency, user control, and responsible AI governance. Allowing deletion by date range enables organizations and individuals to manage data retention policies efficiently while maintaining compliance with regulatory frameworks such as GDPR and internal data governance policies.

The other options are incorrect because deleting a specific conversation or all conversations with a specific agent is not the primary method offered in the My Account activity deletion setting. Instead, deletion is structured around activity time periods.

This capability reinforces generative AI best practices: secure data management, lifecycle control of AI interactions, and user-directed privacy management within enterprise environments.

**NEW QUESTION 9**

You have several pages in Microsoft 365 Copilot related to the research you are doing for a new product. You need to simplify your ability to have many different Copilot conversations about the pages. What should you do first?

- A. Create a stor
- B. Add the pages to a noteboo
- C. Add the pages to a conversatio
- D. Download the pages locally.

**Answer:** B

**Explanation:**

While Microsoft 365 Copilot does not have a single "merge" button for multiple chat histories, you can effectively consolidate different conversations into a single entity using these primary methods:

\* 1. Use Copilot Pages for Dynamic Consolidation

Copilot Pages is the most robust way to build a single "source of truth" from multiple chats.

Add Responses: Below any Copilot response, click the pencil icon to create a new page or the drop-down arrow to add the response to an existing page.

Iterative Building: You can continue different chats and keep sending relevant outputs to the same page, effectively merging various threads into one organized document.

\*-> 2. Leverage Copilot Notebooks

For projects requiring high-volume consolidation, Copilot Notebooks allow you to aggregate diverse sources.

Aggregate Sources: You can pull in OneDrive files, SharePoint documents, and even specific chat snippets.

Consolidated Output: Use a prompt like "Create an executive summary based on all references in this notebook" to generate one unified entity.

[https://techcommunity.microsoft.com/blog/microsoft\\_365blog/introducing-copilot-notebooks-a-whole-new-way-to-work-with-ai-in-onenote/4428626](https://techcommunity.microsoft.com/blog/microsoft_365blog/introducing-copilot-notebooks-a-whole-new-way-to-work-with-ai-in-onenote/4428626)

**NEW QUESTION 10**

You are a project coordinator for a small consulting firm.

You are responsible for tracking client communications, managing project timelines, and preparing weekly status updates for internal stakeholders.

You have a Microsoft 365 Copilot license.

You create an agent to help you monitor project milestones, follow up on client emails, and generate weekly summary reports.

With whom can you share the agent?

- A. only Microsoft Teams channel members
- B. any person who has a valid email address
- C. the people in your organization and people that have personal Microsoft accounts
- D. only the people in your organization

A.

**Answer:** D

**NEW QUESTION 10**

You use Microsoft 365 Copilot.

You need to delete all your conversations by using the least amount of effort.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. the Microsoft 365 Copilot web app
- B. the My Account portal in Microsoft 365
- C. the Microsoft 365 Copilot desktop app
- D. the Settings app in Windows 11

A.

**Answer:** B

**Explanation:**

Microsoft provides centralized activity management controls through the My Account portal, which allows users to manage privacy settings, activity history, and data associated with Microsoft 365 services, including Copilot. When the requirement is to delete all conversations with minimal effort, the most efficient method is to use the account-level activity management tools rather than deleting conversations individually.

The My Account portal enables bulk management of Copilot activity data, allowing users to clear conversation history in a consolidated manner. This approach aligns with Microsoft's privacy-by-design framework, giving users control over their AI-generated interaction history without requiring administrative intervention. Using the Copilot web or desktop app would typically require manually deleting conversations one at a time, increasing effort. The Windows 11 Settings app is unrelated to Microsoft 365 Copilot data management.

Therefore, to delete all Copilot conversations efficiently and with the least amount of effort, the correct approach is to use the My Account portal in Microsoft 365.

**NEW QUESTION 13**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

**Statements**

**Yes**

**No**

You can chat with the Analyst agent from within an existing Microsoft 365 Copilot conversation.

You can chat with the Researcher agent from within an existing Microsoft 365 Copilot conversation.

You can chat with multiple agents concurrently within an existing Microsoft 365 Copilot conversation.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

**Statements**

**Yes**

**No**

You can chat with the Analyst agent from within an existing Microsoft 365 Copilot conversation.

You can chat with the Researcher agent from within an existing Microsoft 365 Copilot conversation.

You can chat with multiple agents concurrently within an existing Microsoft 365 Copilot conversation.

**NEW QUESTION 18**

You receive several images from a colleague. You suspect that the images were generated by using Microsoft 365 Copilot. What can you use to verify whether the

images were AI-generated?

- A. file names
- B. watermarks
- C. content credentials
- D. file descriptions

**Answer:** C

**NEW QUESTION 20**

You are using Microsoft 365 Copilot to plan a trip and have asked Copilot to remember several details about the trip. You cancel the trip plans. You need to ensure that Copilot forgets the details. What should you do?

- A. From the My Account portal, delete the Copilot activity history.
- B. From Copilot delete custom instructions.
- C. From Copilot delete memories.
- D. From Copilot delete all the conversation about the trip.

**Answer:** C

**Explanation:**

Microsoft 365 Copilot includes a memory capability that allows it to retain user-provided preferences or details across interactions when explicitly instructed to remember them. These stored details are referred to as memories and are separate from standard conversation history. If you previously asked Copilot to remember specific trip-related details, those details are stored as structured memory items. Simply deleting the conversation does not necessarily remove stored memory entries. Likewise, deleting activity history through the My Account portal removes conversation records but does not directly manage structured Copilot memories. Custom instructions define persistent behavioral preferences and are unrelated to trip-specific stored data. To ensure Copilot no longer retains those trip details, you must delete the stored memories directly within Copilot. Microsoft documentation explains that users can view and manage saved memories and remove them individually to control what Copilot retains. Therefore, the correct action to ensure Copilot forgets the trip details is to delete the memories.

**NEW QUESTION 25**

In a Microsoft 365 Copilot conversation, you generate a report, and then edit the report in a page. You need to collaborate with a colleague on the report. What are two ways to achieve the goal?

- A. @mention the colleague in the page.
- B. Add the page to a notebook.
- C. Open the page in Microsoft Word.
- D. Share the page link.

**Answer:** AD

**Explanation:**

Microsoft 365 Copilot Pages supports collaboration similarly to other Microsoft 365 documents. Collaboration requires notifying or granting access to colleagues. Using @mentions within the page (Option A) directly notifies the colleague and facilitates collaborative engagement. Sharing the page link (Option D) allows others to access and edit the content according to permissions. These two methods provide complete collaboration workflows. Adding the page to a notebook does not grant collaborative access. Opening the page in Word changes the editing surface but does not inherently enable collaboration unless shared. Therefore, the correct answers are A and D.

=====

**NEW QUESTION 28**

You are creating a custom analytics agent in the Microsoft 365 Copilot app. The agent will use Microsoft Excel files that contain sales data as knowledge. You need to ensure that the agent can create visualizations, perform mathematical operations, create aggregations, and analyze the data in the files. What should you add to the agent?

- A. code interpreter
- B. image generator
- C. a suggested prompt
- D. a template

A.

**Answer:** A

**Explanation:**

When building a custom analytics agent in Microsoft 365 Copilot that must process structured data from Excel files, advanced analytical capabilities are required. According to Microsoft AI Business Professional guidance, tasks such as performing mathematical calculations, generating aggregations, creating charts, and conducting structured data analysis require programmatic execution capabilities rather than simple text generation. A code interpreter enables the agent to run Python-based analytical operations in a secure execution environment. This allows the agent to manipulate datasets, compute totals and averages, perform grouping and filtering, and generate visualizations such as bar charts or line graphs based on the Excel data. The interpreter bridges the gap between natural language instructions and executable analytical logic. An image generator is designed for creative visual content and is unrelated to structured data analytics. Suggested prompts and templates improve usability and consistency but do not provide computational or visualization capabilities. Therefore, to enable mathematical operations, aggregation, data analysis, and visualization of Excel sales data, the correct component to add to the agent is a code interpreter.

**NEW QUESTION 30**

You use Microsoft 365 Copilot to generate a training plan.

You need to check if there are any existing training plans in your organization that are similar to the new training plan. What should you use in Copilot?

- A. Search
- B. Designer
- C. Apps
- D. Pages

A.

**Answer: A**

**Explanation:**

Microsoft 365 Copilot integrates with Microsoft Search to help users discover relevant content across their organization's Microsoft 365 data estate, including SharePoint, OneDrive, Teams, and Exchange. When the objective is to determine whether similar training plans already exist, the appropriate action is to perform a search across organizational content.

Using Search allows Copilot to query indexed enterprise documents and return files, plans, or related materials that the user has permission to access. This supports content reuse, avoids duplication of work, and aligns with Microsoft's guidance on leveraging organizational knowledge efficiently.

Designer is focused on visual content creation, Apps provides access to Microsoft 365 applications, and Pages is used for creating and organizing content within Copilot. None of these options are intended for discovering existing documents across the tenant.

Therefore, to identify similar existing training plans within your organization, the correct tool to use in Copilot is Search.

=====

**NEW QUESTION 33**

You are discussing Microsoft 365 Copilot with a colleague. The colleague asks which data Copilot uses to answer questions when using the Work scope.

What should you tell your colleague?

- A. Copilot provides responses based only on the general knowledge that Copilot was trained on.
- B. Copilot provides responses based on all the data in your organization's Microsoft 365 environment and the general knowledge that Copilot was trained on.
- C. Copilot provides responses based only on data that the user can access and the general knowledge that Copilot was trained on.
- D. Copilot provides responses based only on data that the user can access.

A.

**Answer: C**

**Explanation:**

Microsoft 365 Copilot operates within two primary knowledge boundaries: its foundational large language model training data and the organizational data available within the Microsoft 365 tenant. However, Copilot strictly enforces Microsoft's security and compliance model, meaning it only retrieves and uses data that the signed-in user is authorized to access.

When using the Work scope, Copilot combines the general knowledge it was trained on with organizational data such as documents, emails, chats, calendars, and files stored in Microsoft 365. Importantly, Copilot respects role-based access control and existing permissions. It does not surface information from content the user does not have access to.

Option A is incomplete because Work scope includes organizational data. Option B is incorrect because Copilot does not access all tenant data indiscriminately; it is permission-scoped. Option D is incomplete because Copilot also leverages its general training knowledge.

Therefore, the correct explanation is that Copilot provides responses based only on data the user can access, combined with its general training knowledge.

**NEW QUESTION 36**

You receive the following response to a prompt: "Sorry, it looks like I can't respond to this. Let's try a different topic."

What is a possible cause of the response?

- A. The prompt is too vague to elicit a response.
- B. The prompt contains language that violates safety guidelines.
- C. The prompt contains more than five requests.
- D. The prompt is larger than the allowed context window.

**Answer: B**

**Explanation:**

Microsoft 365 Copilot follows Microsoft's Responsible AI principles and enforces strict content safety policies. When a prompt violates safety guidelines---such as containing harmful, abusive, illegal, or restricted content---the system may refuse to generate a response. The refusal message shown is consistent with safety filtering behavior.

Generative AI systems include moderation layers that evaluate prompts before generating output. If the prompt is classified as unsafe or non-compliant with policy, Copilot blocks the request and encourages the user to try a different topic.

A vague prompt typically results in a generic or clarifying response rather than a refusal. There is no fixed limit of five requests per prompt. Exceeding the context window usually results in truncation or processing errors, not a safety-based refusal message.

Therefore, the most likely cause of the response is that the prompt contains language that violates safety guidelines.

**NEW QUESTION 41**

You are using Microsoft 365 Copilot to enhance your productivity in Microsoft Outlook. Which two tasks can you achieve by using Copilot in Outlook? Each correct answer presents a complete the solution. NOTE: Each correct selection is worth one point.

- A. Insert a custom HTML signature that has specific formatting.
- B. Generate a draft response to an email based on the context of the conversation.
- C. Create a summary of unread emails in your inbox.
- D. Customize the folder structure to organize your emails.

**Answer: BC**

**NEW QUESTION 43**

You run a saved prompt and receive the following response:

"You asked for a summary of File.docx. However, the file appears to be either empty, corrupted, or in a format that I cannot process."

What is a possible cause of the response?

- A. You did NOT schedule the prompt to run.
- B. You ran the prompt from a web app instead of a desktop app.
- C. You used the wrong agent to run the prompt.
- D. You do NOT have access to the file.

**Answer: D**

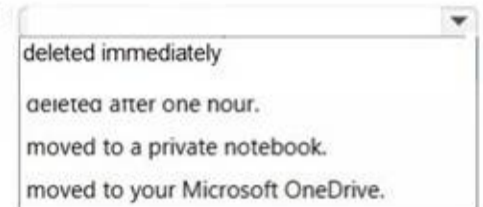

**NEW QUESTION 44**

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

If you start a temporary chat in Microsoft 365 Copilot, and then start a new chat, all the prompts and responses from the temporary chat will be

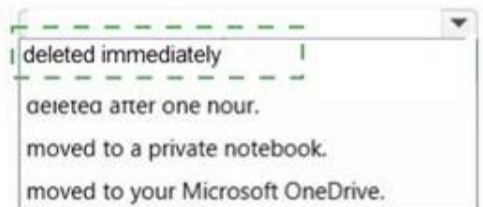

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

Answer Area

If you start a temporary chat in Microsoft 365 Copilot, and then start a new chat, all the prompts and responses from the temporary chat will be

**NEW QUESTION 47**

You sign in to the Microsoft 365 Copilot app by using your work account as shown in the exhibit.

A colleague tells you that when they open the Microsoft 365 Copilot app, they have access to the Researcher agent. You need to access the Researcher agent.

What should you do?

- A. From Microsoft Edge, use your work account to sign in to <https://copilot.microsoft.com>.
- B. Select Explore agents and then search for Researcher.
- C. Sign in to the Copilot app by using a personal account.
- D. Request a Microsoft 365 Copilot license from an administrator.

**Answer: B**

**NEW QUESTION 51**

You have a Microsoft 365 subscription.

You do NOT have a Microsoft 365 Copilot license.

When you send a prompt in Microsoft 365 Copilot Chat, which three sources does Copilot Chat use to respond? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. chat data in Microsoft Teams
- B. your organization's databases
- C. the prompt context
- D. organizational data in Microsoft 365
- E. internet search data
- F. the conversation history

**Answer: CEF**

**NEW QUESTION 52**

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

enables organizations to apply governance policies to conversations generated by using Microsoft 365 Copilot.

- Microsoft Defender for Cloud
- Microsoft Entra ID
- Microsoft Intune
- Microsoft Purview

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

enables organizations to apply governance policies to conversations generated by using Microsoft 365 Copilot.

- Microsoft Defender for Cloud
- Microsoft Entra ID
- Microsoft Intune
- Microsoft Purview

NEW QUESTION 56

You are using Microsoft 365 Copilot to enhance your productivity in Microsoft Teams. Which two tasks can you achieve by using Copilot in Teams? Each correct answer presents a complete the solution. NOTE: Each correct selection is worth one point.

- A. Mute and unmute participants in a meeting based on their location.
- B. Create a custom background and add the background to your video calls.
- C. Create a meeting summary, including key decisions and action items.
- D. Draft a response to a channel message based on the context of the conversation.

Answer: CD
